

Contact Tracing

Integrates Apple and Google's Contact Tracing technology that notifies people of an interaction with someone who has contracted COVID-19.

1

Opt in to Contact Tracing

Download the app and opt in to contact tracing.

2

Phone Key Code Exchange

This technology automatically exchanges secure key codes from people you have been in close proximity to.

3

COVID-19 Infection

When a person has been infected with COVID-19, s/he updates his/her status as a COVID-19 carrier.

4

Status Update to the Cloud

COVID-19 status is sent to the centralized database using an anonymous ID and runs contact matching and risk analysis on those people who may be at risk.

5

Phone Notifications

Once contact matching has occurred, notifications are sent based on who that person has been in contact with in order to limit further transmission of COVID-19.

6

GVP Status Updated

GVP status automatically displays the person's status as a COVID-19 Carrier.
